Tidewell Grid Systems

Predictive outage prevention for rural electric cooperatives

www.tidewell-grid.example | founders@tidewell-grid.example

SYNTHETIC SAMPLE DECK - fictional company for demonstration only

The problem: co-op members sit in the dark

- Rural electric co-ops run thin crews across long, exposed feeder lines
- Members of our pilot co-ops averaged 286 outage minutes in 2025
- 61% of outages traced to vegetation and aging equipment (pilot utility data)
- Crews find failures only after members call in

Why now

- Smart-meter coverage at our target co-ops reached 74% in 2025
- New state resilience rules (effective 2026) require annual outage-risk plans
- Wildfire liability is pushing co-ops to find faults before they spark

Tidewell Forecast

- Predicts feeder-level failures up to 10 days ahead
- Combines smart-meter voltage signals with weather and asset age
- Outcome: crews fix problems before members lose power

What stands in the way - and how we remove it

Obstacle	Tidewell capability
Data scattered across meters, SCADA and GIS	Pre-built connectors; live in under 2 weeks
Small co-ops have no data scientists	Prioritised work orders, no analysts needed
Crew time is scarce	Risk-ranked patrol routes

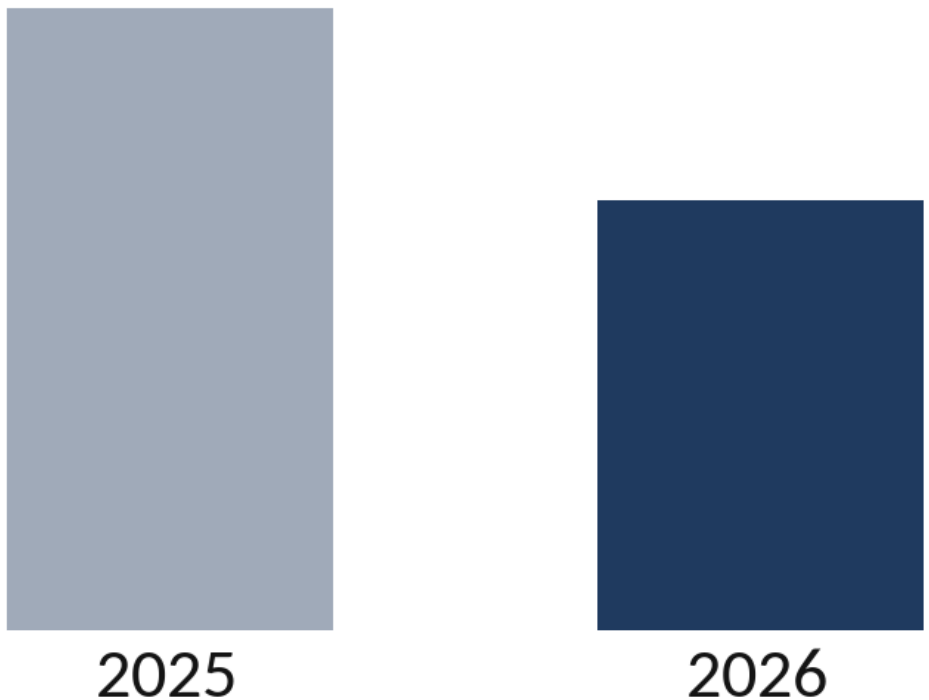

Traction

- ARR $1.2M (September 2026)
- 9 signed co-op customers
- 4 paid pilots under way; 12 co-ops in pipeline
- Net revenue retention 118% (trailing 12 months)

Pilot results: Pilot Co-op A

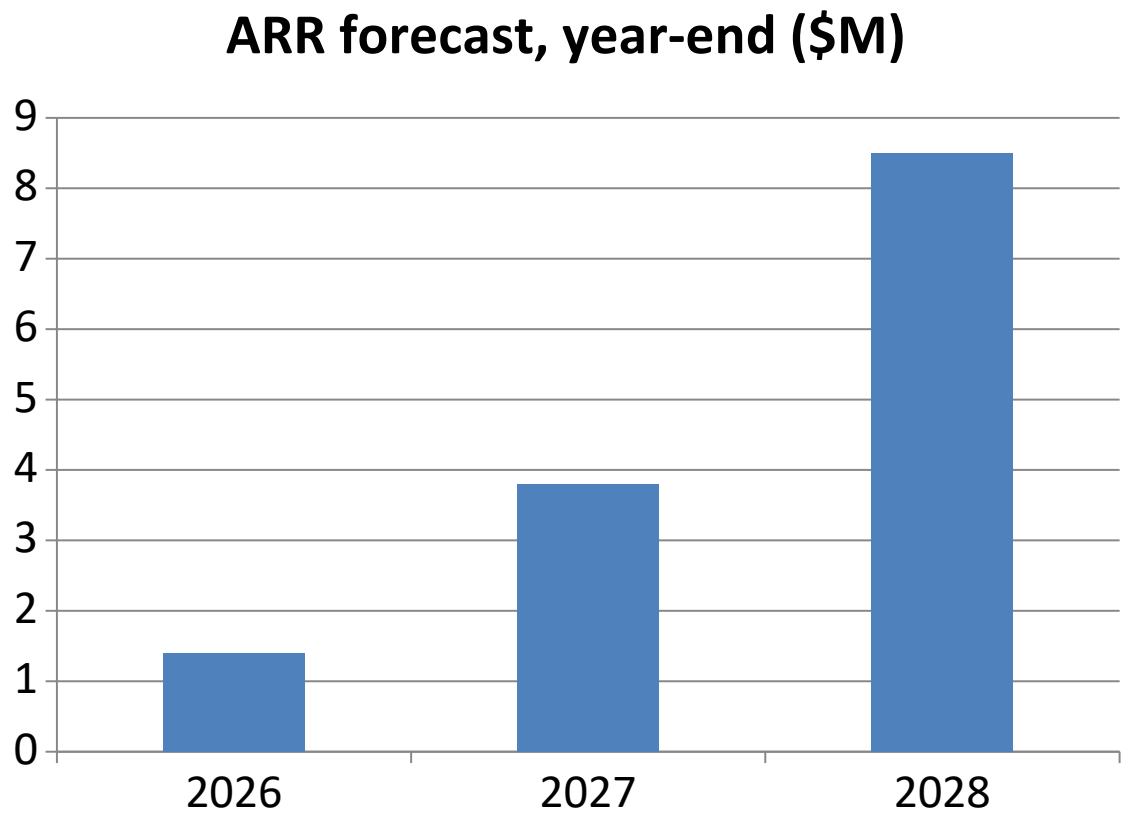

31% fewer outage minutes over 6 months

Mar-Aug 2026 vs. same months 2025

Market

812 US distribution co-ops in our segment
Average contract value $95K per year
Serviceable market: 812 x $95K = $77M per year
Utility analytics market: $4.1B (industry estimate)

Business model

- SaaS subscription priced per meter: $1.10 per meter per year
- Three-year contracts, billed annually
- Gross margin 78% (FY2025 actual)

Why Tidewell wins

- Generic utility analytics are built for investor-owned utilities
- Tidewell is built for co-ops with 5,000-80,000 meters
- Deploys in 2 weeks versus 6-9 months for incumbents
- US provisional patent application filed March 2026

Team

- Dana Okafor, CEO - 14 years in operations at a generation and transmission co-op
- Ravi Menon, CTO - 8 years building grid forecasting models
- Lena Torres, Head of Customer Success - former co-op line crew supervisor

The raise

- Raising $4M seed on a SAFE with a $20M post-money valuation cap
- $1.5M committed from existing angel investors
- Current ARR $1.4M
- Use of funds: 45% engineering, 35% sales, 20% operations
- Milestone: $4M ARR and 30 co-op customers by Q4 2027
